

The most important endpoints of the Transkribus REST API

Cf. <https://transkribus.eu/TrpServer/Swadl/wadl.html>

Be aware that most endpoints return JSON, though some return XML!

/collections/list

(GET) Metadata of your collections

/collections/{collId}/list

(GET) Metadata of the collection

/collections/{collId}/stats

(GET) Statistics of the collection

/collections/{collId}/metadata

(GET) Metadata of the collection

/collections/{collId}/{docId}/list

(GET) Metadata of the document

/collections/{collId}/{docId}/metadata

(GET) Same as .../list

/collections/{collId}/{docId}/stats

(GET) Number of regions, lines, pages and their status etc.

/collections/{collId}/{docId}/pages

(GET) Metadata of the pages in a document

/collections/{collId}/{docId}/fulldoc

(GET) Full metadata of all the pages, including lists of all transcripts

/collections/{collId}/{docId}/pages

(GET) Same as fulldoc but only the metadata of the current transcript

/collections/{collId}/{docId}/{page}/list

(GET) List of transcripts with metadata

/collections/{collId}/{docId}/{page}/curr

(GET) Metadata of the current transcript (i.e. the first element of the list of transcripts)

/collections/{collId}/{docId}/{page}/text ==> returns XML!!

(GET) XML of the whole page

/collections/{collId}/{docId}/{page}/isLocked

(GET) Returns a boolean indicating whether a page is locked

/collections/{collId}/{docId}/{page}/lock

(POST) params: true/false. Lock and unlock a page

/collections/{collId}/{docId}/{page}/{transcriptId}/status

(POST) params: status. Set the status of a page
